Rooftop Quality Assurance is a one-day course for professionals interested in performing observation to assure that roof installation is consistent with construction documents. The program covers the diverse and challenging aspects of roofing as encountered in the field and is ideal for roofing material manufacturers, general contractors, quality assurance observers, and field inspectors.

Course participants will receive objective and detailed information regarding the duties of the roof quality observer. It helps prepare individuals to provide an independent measure of quality and to assist with project communications and coordination. Instructors cover fundamentals of quality assurance, component assembly and quality practice guidelines for a variety of roofing systems, including: role of the roof observer, construction contract documents, daily reports, low-slope roofing' spray-applied foam, steep-slope roofing, ethics and codes.

The course provides useful information for the individual who is preparing for the Registered Roof Consultant (RRC) and the Registered Roof Observer (RRO) exams.
